1 DevOps at Sonatype

Lessons Learned from Using Repository Managers and Software Supply Chain Tools

Manfred Moser - @simpligility

- Community Advocate, Author & Trainer

Brian Fox - @brian_fox

- VP of Product Management

Sonatype - @sonatype - www.sonatype.com

2 What Are You Learning Today?

What worked? What caused problems?

→ Apply *our* lessons to *your* situation

3 What does Sonatype actually do?

Manages and develops:

- Central Repository (aka Maven Central)
- OSSRH and related Forges
- Nexus Repository Manager
- Nexus IQ Server
- Nexus IQ Data Services
- Related documentation, websites, blogs, videos,. . .

4 Software Component Warehouse

Nexus Repository Manager

- 70% market share
- > 61K active server installations
- Open Source: Maven2, npm, RubyGems, NuGet, Docker, . . .
- Commercial: Component Information, Staging, Smart Proxy, User Token, . . .
- Nexus 3 - distinct new codebase

5 Software Supply Chain Solutions

Solutions:

- Nexus Firewall
- Nexus Auditor
- Nexus Lifecycle
- Nexus Suite

Include

- Nexus IQ Server
- Integrations with Jenkins, Hudson, Bamboo
- Eclipse IDE/M2e Plugin
- SonarQube integration
- Command-line tool and REST API

All of this is backed by…

6 Nexus IQ Data Services

Data and services for:

- Age
- Popularity
- Security vulnerabilities
- License information
- Multiple component formats

→ Constantly updated, curated and accurate data.

7 Central Repository

aka. Maven Central

- Largest Maven2 format repository
- High performance, global CDN
- > 17 billion download in 2014
- > 1 million GAV coordinates
- Default in Apache Maven and others

And the components come from…

8 OSSRH and Forges

Input funnel for Central Repository

- OSSRH - large deployment of Nexus Repository Manager
- Apache, JBoss, . . . - secondary Nexus instances
- Community support - on-boarding and documentation

9 More OSSRH and Central Stats

- currently about 100k projects total
- approx. 3000 new projects each month (GA)
- 10 - 30 project verified and onbarded per day
- approx. 30.000 new releases each month (GAV)

10 Who Helps at Sonatype

- Internationally distributed
- Multiple-time zones
- Remote work the rule, not the exception
- Roughly 100 people

Tip
Western North America to Eastern Europe

---

11 Teams

- Numerous smaller teams
- Different focus of teams
- Cross-team members
- Dynamic grouping around efforts - *task force*

12 Process

In a nutshell - nothing special, no surprises.

13 Process

- Scrum framework
- Kanban inspired
- Backlog refinement
- Regular meetings

→ Differs per team!

> Everyone has their own process. You need to figure out what works for you!

14 Communication

- Good old phone and VOIP
- Atlassian HipChat
- Google Hangouts
- join.me
- PagerDuty

Tip
Using video more has helped avoid misunderstandings.

---

15 Source Control

- GitHub - public and private
- Atlassian Stash - private only

Tip
We are an early Git adopter and use it exclusively.

---

16 Track and Plan

- Atlassian JIRA
- Trello
- Basecamp
- Aha.io
- Salesforce

Tool Lessons:

- Different people use different tools
- Overlap is inevitable
- Be prepared to implement integrations
- Tools come and go - be agile

17 Continuous Integration

- Stopped using Hudson long time ago
- Atlassian Bamboo

Important
CI infrastructure is an invaluable workhorse!

18 Build

- Apache Maven
- Grunt and NPM for client side
- Shell scripts

19 Maven Tips and Tricks

- Maven wrapper
- Follow best practices
- Organization POM
- Enforcer Plugin
- and lots more

20 (Maven) Project Complexity

Find balance for

- Number vs size of projects
- Multi-module vs multiple projects
- Consider release cycle
- IDE functionality
- Build time

Tip
Example Nexus OSS and Nexus Repository Manager

21 Develop

- Feature branches
  - short lived
  - sometimes shared between
  - automatic Bamboo feature branch build creation
- IDE
  - Eclipse IDE
  - IntelliJ IDEA
- Lots of OSX, some Windows & Linux

22 Test

Unit, functional and manual

- Junit
- Geb
- Spock
- Pax Exam
- Selenide

Tip
No tests, no merge!

---

23 Document

Multiple output formats from:

- Atlassian Confluence
- Google Docs
- Asciidoc
- Pelican

Instituting development workflows including

- Git-based versioning
- and branching,
- pull requests and reviews
- and CI builds

is very useful!

24 Continuously Build

- Atlassian Bamboo
- > 100 build plans
- Elastics Bamboo - EC2 instances
- Feature branch builds increases number
- Automated functional test suite runs
- Automated release
- Documentation builds and deployments

25 Build Plan Commonalities

All builds plans:

- Common configuration from base plan - used as shared artifact, managed in git repo
- Global variables - defaults that allow overrides
- *build* task - compile and test code.
- *release* task - publish to Nexus and tag in git
- bundle test artifacts
- Main vs features branches - different config
- Branch builds auto-created

Tip
Consistency helps users and administrators.

---

26 Bamboo Set Up & Tips

- Base plan for resources like tool configuration
- Fresh Maven repo for each build off Nexus
- Build plan notifications into HipChat channels
- Linked to GitHub branch and PR
- Linked to JIRA issue

27 More Bamboo Set Up & Tips

- Limited number of standard Amazon Machine Images (AMI)
  - Include standard tools
- Share and store repo and other outputs as build artifacts
  - Stored on Amazon Elastic Block Storage (EBS)
- Static documentation = usable artifact

28 Validate

- SonarQube - integrated in Bamboo and GitHub
- License check with Maven plugin
- Pull requests and code reviews
  - No merges without build passing and code review
- Component policy with Nexus Lifecycle

29 Release

- Workflow and notification with Nexus staging
- Including validation with Nexus Lifecycle
  - Security checks
  - License checks
  - Architecture checks (e.g. component age)
- Usage of release build number - `2.11.4-01`
- Same release stuff on OSSRH

Tip
No matter what you do .. there is always a chance something goes wrong.

---

30 Release

31 Software Supply Chain Management

> We are dogfooding our own tools

- Nexus Repository Manager
- Nexus Lifecycle

including Bamboo integration and IDE integration.

32 Nexus Repository Manager

- Component source for consumers
- Component target for producers

33 Colocate For Performance

Continuous integration is consumer and producer.

Best practice:

- Get it close together
- And sync to another repository if needed.

images/nexus-bamboo-rso.png

34 Nexus Lifecycle

- Define risks we care about
- Open source contributions change our policy
- Understand our process and tooling
- Limit overhead in our build automation

We gain

- Visualized risk through rule-based automation
- Streamlined component selection based on real time data

35 Nexus IQ Server Deployment

images/nexus-iq-server-integration.png

36 Policy Configuration

Simplified version:

images/sonatype-policy.png

37 Resulting Report

Overview section in notification:

images/nexus-clm-report.png

38 Nexus Repository Manager Tips

Here are a few things that work for us

- Versioning and component deployment
  - Only SNAPSHOT versions of *master* are deployed
  - Feature branch versions are *not* deployed
- Multiple server installations
  - In different networks
  - Smart proxy between them
- Release with Staging
  - Dogfooding ourselves
  - Thousands of users and projects on OSSRH

39 Black Listing and White Listing

Define

- Which components are okay to be used?
- Which components are *not* okay to be used?

Problem

- Too many criteria
- Complex and labor intensive to figure out criteria and values
- Usage influences criteria
- Different usage for different projects

Important
It just doesn't work! Too slow. Not scalable.

40 Golden Repository

Only the good components can be in the repository.

Problems:

- Components age like milk, not wine!
- A golden repository per project?
- Does not scale

Important
On the surface it looks easy. It's *not*!

41 Perimeter Protection

Nexus Firewall

- Requires up to date and accurate information
  - As provided by Nexus IQ Data Services
- Tremendous help to reduce influx
- But does not control usage

Tip
Helps, but is not the full solution. Just like a network firewall. Its not enough.

42 Nexus Lifecycle Lessons

Once we had Nexus Lifecycle and started using it...

- Surprised how many components are used
- Blocking a release for policy violations
  - is a big stick
  - but it works
- Shared ownership helps - socialize the resolution/enforcement process
- Initial introduction forced some cleanup of old issues
- Ongoing low noise and fast results increases usage, adoption

→ Without the automation this would be not achievable!

43 Deploy

Ops team:

- RPMs
- Docker images
- Manual tweaks
- Ansible

44 Operations

- SaaS is used whenever possible
- Kanban process
- iDoneThis

Tip
Our Nexus instances vary from hundreds of GB to terabytes of non-proxied context.

45 Operations - Service Management

Nexus as component warehouse with Ansible

46 Support

The support team consists of engineers only.

- Write lots of automation and other code
- Atlassian JIRA
- ZenDesk

47 Community

- Actively work with vendors
- Including open source projects
- Help upstream to help yourself
  - Report issues
  - Release testing
  - Contributions
- Avoid forking third party libraries
  - But do it cleanly when necessary
  - And send back upstream

48 What's Next?

- Join the Nexus community at http://www.sonatype.org/nexus
- Start using Nexus OSS
- Try Nexus Repository Manager
- Try Nexus Lifecycle

Tip
Come to our booth for demos, T-shirts and more.

---

49 The End

Want to help us → we are hiring!
